

SARANYA DHEVE B

FULL STACK JAVA DEVELOPER

saranyadheve27@gmail.com | +91 95979 97542 | LinkedIn | GitHub | Portfolio

EXECUTIVE SUMMARY

Full Stack Java Developer skilled in building and shipping REST APIs, Spring Boot back-ends, and React frontends, with internship experience delivering an AI-powered microservices platform secured with JWT and Spring Security. Accelerated MySQL query performance by ~25% and eliminated ~40% of manual effort across 3+ production-ready applications. Applies AI tools — ChatGPT, Claude AI, and NotebookLM — to streamline development workflows within CI/CD pipelines and Azure cloud environments.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript

Frontend: React, HTML5, CSS3, Responsive Design, Cross-browser Compatibility

Backend: Spring Boot, Spring MVC, Spring Security, REST APIs, JDBC, Microservices

Database: MySQL, Query Optimization, CRUD Operations, Schema Design

Tools: Git, GitHub, Maven, Postman, Swagger UI, VS Code

Cloud & DevOps: Azure Virtual Machines, CI/CD Pipelines, App Hosting

AI Tools: ChatGPT, Claude AI, NotebookLM, Antigravity

Concepts: OOP, MVC Architecture, DBMS, Agile Collaboration, Version Control

PROJECTS

AI-Integrated Smart Revision Scheduler with Fatigue Detection | Java | Spring Boot | Python | FastAPI | Scikit-Learn | React | MySQL | JWT

- Architected a microservices full-stack platform connecting Spring Boot, FastAPI, and React with a Random Forest ML model, delivering real-time fatigue prediction across 3 distributed services for 50+ users
- Secured multi-service REST APIs via JWT and Spring Security with granular role-based access control, achieving sub-2s response time and zero unauthorized access incidents across all sessions

Smart Expense Manager | Java | Spring Boot | MySQL | HTML | CSS | JavaScript

- Shipped a full-stack expense management application using Spring Boot REST APIs processing 200+ records with complete CRUD support, accelerating MySQL query performance by ~25% via schema refinement
- Eliminated ~40% of manual tracking effort through a mobile-friendly, cross-browser-compatible UI paired with a secure back-end and structured exception management across all modules

Task Manager Web Application | Python | FastAPI | React | MySQL | Swagger UI

- Launched a full-stack task system with FastAPI RESTful APIs, React (Vite) frontend, and granular role-based authentication via Context API handling 50+ concurrent users with sub-2s response time
- Stress-tested and documented all endpoints via Swagger UI, achieving scalable production deployment with zero critical defects across 3 release cycles and 100% endpoint coverage

INTERNSHIP EXPERIENCE

Full Stack Java Intern — Phoenix Softech

- Engineered 6+ production-grade REST APIs using Core Java and Spring Boot, processing real-world business transactions across 3 workflow modules with complete end-to-end data handling
- Accelerated MySQL query execution by ~25% through targeted schema restructuring, selective indexing, and join refactoring across 10+ database tables
- Eliminated 15+ critical back-end defects during QA phases; maintained clean Git repositories across a 4-member agile team with zero merge conflicts throughout the project lifecycle

Cloud Computing Intern — Innoknowvex

- Deployed 2 Java applications on Azure virtual machines achieving 99% uptime, saving 3+ hours/week of manual deployment effort across 2 production environments
- Configured cloud storage, networking, and app hosting; applied CI/CD pipeline automation to cut release cycle time by ~50%

CERTIFICATES

- NPTEL – Programming in Java
- Phoenix Softech – Full Stack Web Development in Java

EDUCATION

B.E. in Computer Science | University College of Engineering, Dindigul | Batch: 2022–2026 | CGPA: 8.5
